

Oilseeds: World Markets and Trade

China Soybean Crush Plummets in 2021/22

For the first half of the year, China soybean processing slowed to levels unseen since the African swine fever (ASF) outbreak in 2018/19 and 2019/20. Through the first half of 2021/22, soaring feed costs and low meat prices led to reduced soybean crush levels.

China focused on rebuilding its swine herds after recovering from ASF. However, the rapid recovery of China's hog industry outpaced domestic demand for pork while supplies of other meats grew, driving down pork prices amidst high feed prices.

The drought in South America tightened global soybean exportable supplies and fueled higher prices. In March, Argentine and U.S. soybean export prices reached two-decade highs and Brazilian prices reached 10-year highs. Although elevated feed prices are contributing to a slight shift to lower cost feed ingredients such as rice and pulses, soybean meal will continue to be an important part of feed rations.

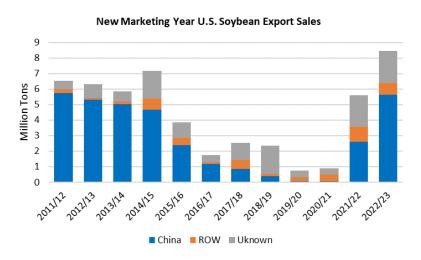

Soybean prices are expected to remain high for the remainder of 2021/22 as global supplies are limited. If high feed costs and low meat prices continue, crush will remain weak.

MARKET FEATURES

U.S. Soybean Export Sales Soar for Next Marketing Year

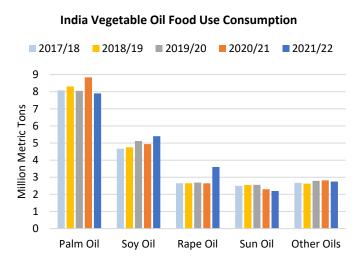

U.S. soybean export sales for the next marketing year (MY 2022/23) are at an 11-year high as of March 31, 2022. China dominates 2022/23 U.S. soybean sales with nearly 70 percent of total new-crop sales.

Prices for new crop soybeans (November futures contract) are 12 percent lower than current crop beans (May contract). As current crop

prices remain higher, buyers with large stocks and slowing feed demand—such as China – can wait for the new U.S. crop to lock in lower-priced soybeans. China soybean imports for 2021/22 are cut 3.0 million tons. Similarly, South America supplies are constrained as soybean exports are further reduced for the third consecutive month.

India Turns to Soybean and Rapeseed Oil to Meet Food Use Demand

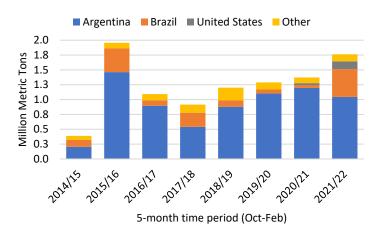

India is the world's second-largest consumer of vegetable oil for food and is forecast to consume 21.8 million tons in 2021/22. However, India is highly dependent on imports to meet domestic demand as imports accounted for about two-thirds of food use consumption over the past 5 years. In a typical year, palm oil (40 percent) and sunflowerseed oil (11 percent) comprise more than half of India vegetable oil food consumption. However, over the past 4 months, the combined forecast for palm and sunflowerseed oil imports have been cut nearly 1.5 million tons on

high edible oil prices, gains in domestic rapeseed production, restrictive Indonesia palm oil trade policies, and disruptions to sunflowerseed oil trade as a result of the Russian invasion of Ukraine.

In order to meet food use demand. India has been purchasing soybean oil at the highest rate since 2015/16 when a disappointing rapeseed crop the prior season drove higher imports. Through the first 5 months of 2021/22, shipments from Argentina, Brazil, and the United States are up nearly 30 percent versus the same period last year. Brazil and the United States have seen the biggest jump in exports of soybean oil to India. In fact, the United States has shipped more soybean oil to India over the past 4 months than in the previous 8 years combined. Similarly, Brazil

Soybean Oil Exports to India (Oct-Feb)

Source: Argentina National Institute of Statistics; Brazil Ministry of Development, Industry and Trade; U.S. Census Bureau; Other TDM derived

soybean oil exports to India from October 2021 to February 2022 are 10 times larger than the same period last year and a record for that timeframe.

In addition, India will likely rely more heavily on rapeseed oil in 2021/22 than in prior years. India has already begun to harvest a record rapeseed crop. Normally, the new crop is sold to domestic crushers in March and April and the resulting oil is consumed domestically almost entirely for food. As a result of the bumper crop, India is forecast to produce an additional 800,000 tons of rapeseed oil which would help offset diminished imports of sunflowerseed oil and palm oil. Soybean oil imports are likely to slow as rapeseed crush ramps up and the resulting rapeseed oil hits the shelves. However, if farmers are reluctant to sell their rapeseed supplies in order to hold out for higher prices, strong soybean oil imports could continue over the coming months.

PROJECTION FOR 2021/22

Global oilseed production is down marginally as the drought in South America continues to lower soybean production for the fourth consecutive month, more than offsetting small gains in palm kernel production in Indonesia and Malaysia. Global trade is cut on lower soybean exports from Brazil, Paraguay, Russia, and Ukraineand reduced sunflowerseed from Russia, Kazakhstan, and Ukraine. These changes more than offset gains for U.S. soybean exports. Global crush is trimmed on lower soybean processing in China and Paraguay despite gains in Brazil. Slashed sunflowerseed crush in Ukraine more than offsets increases in Argentina and EU. Global ending stocks are boosted on higher Ukraine sunflowerseed carryout and larger Brazil and Russia soybean stocks that more than offset lower Argentina and U.S. soybean stocks.

Global protein meal production is reduced slightly in line with crush. Global meal trade is down marginally as reductions in Ukraine sunflowerseed meal shipments more than offset fractional gains for other protein meals. Soybean meal trade is little changed overall with large gains in Brazil exports being mostly offset by lower China, EU, U.S., and Ukraine trade. Global ending stocks are up slightly on higher EU soybean, Indonesia palm kernel, and global sunflowerseed meal carryout. Global vegetable oil production is partially raised on an uptick in Indonesia and Malaysia palm oil production more than offsetting falling Ukraine sunflowerseed oil and China soybean oil production. Global vegetable imports are lowered on reduced sunflowerseed oil exports from Ukraine and Russia. Global vegetable oil ending stocks are up 8 percent from last month on larger Indonesia palm oil and Russia sunflowerseed oil carryout. The projected U.S. season-average farm price for soybeans is unchanged at \$13.25 per bushel.

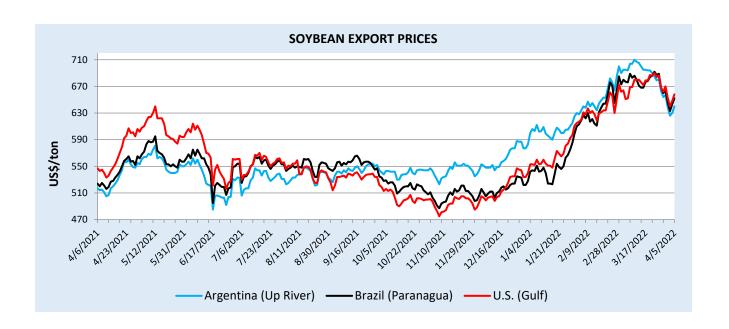

EXPORT PRICES

March 2022 Soybean Export Prices

	U.S.	Argentina	Brazil
March Avg Price	\$673/ton	\$688/ton	\$677/ton
Change vs February	+ \$41/ton	+ \$40/ton	+ \$44/ton

Source: International Grains Council. All prices are FOB: U.S. Gulf, Argentina Up River, and Brazil Paranagua.

Soybean prices rose in March with monthly average prices hitting multi-decade highs in the United States, Argentina, and Brazil. Lingering impacts of the drought in South America plus events in the Black Sea region were the primary drivers. Prices peaked in mid-March and declined as markets adjusted to weakening demand due to higher prices and slowing crush in China.

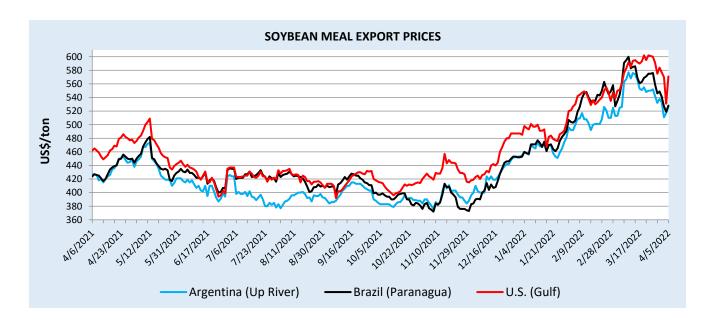

March 2022 Soybean Meal Export Prices

	U.S.	Argentina	Brazil
March Avg Price	\$582/ton	\$548/ton	\$566/ton
Change vs February	+ \$44/ton	+ \$43/ton	+ \$32/ton

Source: International Grains Council. All prices are FOB: U.S. Gulf, Argentina Up River, and Brazil Paranagua.

Soybean meal prices rose in March reaching 8-to-10-year highs reflecting higher soybean prices and expected strong demand with tight sunflower meal supplies. Prices declined into early April as soybean prices fell and as strong oil demand encouraged discounting to move growing supplies.

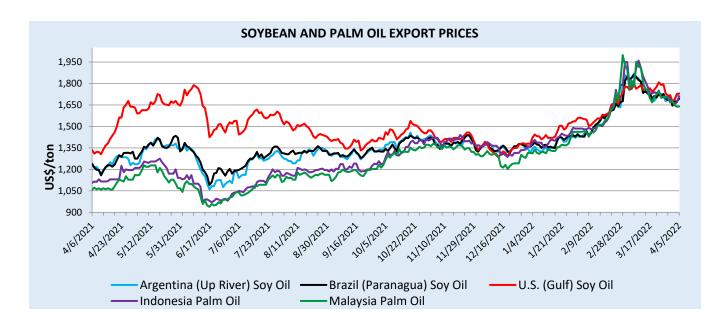

March 2022 Soybean and Palm Oil Export Prices

	U.S.	Argentina	Brazil	Indonesia	Malaysia
	Soybean Oil	Soybean Oil	Soybean Oil	Palm Oil	Palm Oil
March Avg Price	\$1,760/ton	\$1,759/ton	\$1,752/ton	\$1,789/ton	\$1,782/ton
Change vs February	+ \$176/ton	+ \$227/ton	+ \$219/ton	+ \$238/ton	+ \$241/ton

Source: International Grains Council; all prices are FOB: U.S. Gulf, Argentina Up River, Brazil Paranagua

Average March soybean and palm oil prices reached 20-year record highs. Increasingly tight global vegetable oil supplies, rising soybean prices, and events in Ukraine contributed to the higher prices. Prices declined after peaking in early March as the market seeks to recover lost demand.

2021/22 OUTLOOK CHANGES (All figures are in thousand metric tons)

Commodity	Attribute	Previous	Current	Change	Reason
